

**What is claimed is:**

1. A pair of hairdressing scissors comprising two cutting members pivotally connected together, each said cutting member including a handle having a first side and a second side, a first groove being defined in said first side of each said handle, a second groove being defined in said second side of each said handle, a magnetic member being mounted in each said first groove in a manner that said magnetic member has an exposed portion outside the respective handle, said exposed portion of each said magnetic member of the pair of hairdressing scissors being adapted to be securely engaged with a second groove of a respective handle of another pair of similarly constructed hairdressing scissors.
2. The pair of hairdressing scissors as claimed in claim 1, further including a frame ring mounted between each said magnetic member and a periphery delimiting the respective first groove.
3. The pair of hairdressing scissors as claimed in claim 1, wherein each said magnetic member has a thickness equal to a sum of a depth of the respective first groove and a depth of the respective second groove.
4. The pair of hairdressing scissors as claimed in claim 1, wherein each said magnetic member has a thickness greater than a sum of a depth of the respective first groove and a depth of the respective second groove.
5. The pair of hairdressing scissors as claimed in claim 2, wherein each said magnetic member has a thickness equal to a sum of a depth of the respective first groove and a depth of the respective second groove.
6. The pair of hairdressing scissors as claimed in claim 2, wherein each said magnetic member has a thickness greater than a sum of a depth of the respective first groove and a depth of the respective second groove.

7. A pair of hairdressing scissors comprising two cutting members pivotally connected together, each said cutting member including a handle having a through-hole extending from a first side thereof through a second side thereof, a magnetic member being mounted in each said through-hole, said magnetic
- 5 members of the pair of hairdressing scissors and magnetic members of another pair of similarly constructed hairdressing scissors attracting each other, thereby connecting the pair of hairdressing scissors and said another pair of similarly constructed hairdressing scissors together.
8. The pair of hairdressing scissors as claimed in claim 7, wherein said
- 10 magnetic member has a thickness equal to a depth of the respective through-hole.
9. The pair of hairdressing scissors as claimed in claim 7, wherein said magnetic member has a thickness greater than as a depth of the respective through-hole.
- 15 10. The pair of hairdressing scissors as claimed in claim 7, further including a frame ring mounted between each said magnetic member and a periphery delimiting the respective through-hole.
